

PROJECT PLANNER EXAMPLE

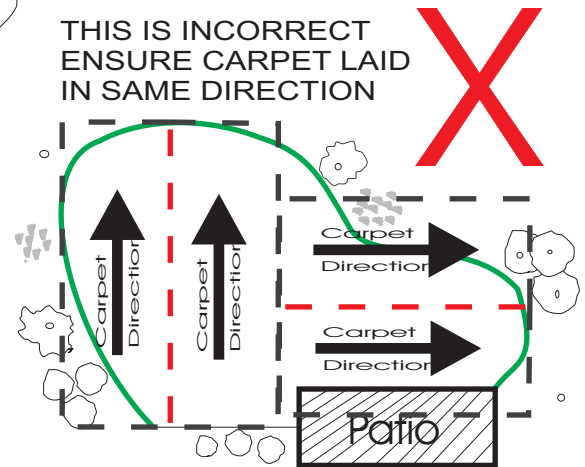

available in 2m widths and up to 20m long

Qty	Size	Sq.M.
2	9 x 2	36.0
1	5.6 x 2	11.2
Carpet Area		47.2

Lawn Area
Use grid to determine lawn area **37.0**

THIS IS INCORRECT
ENSURE CARPET LAID
IN SAME DIRECTION

SOWGREEN is supplied in 2m widths and roll lengths up to 20m.

Work out the best way to position the rolls to minimise the number of joints.

This simply means deciding whether to lay the rolls from top to bottom or left to right across the garden.

Never lay the rolls in different directions as this will detract from the overall finish.

WEED MEMBRANE : A weed membrane should be laid prior to laying SOWGREEN as a precautionary measure. Use the carpet area you have calculated to work out how much you need and allow 10% to overlap.

JOINTS : Once you have determined your carpet layout you can calculate how many joints you will have. These will need gluing together. The operation is very simple and we provide the adhesive, jointing tape and applicator to do this.

SAND : The SOWGREEN carpet is designed to be dressed with a specialist grade sand. The weight of the sand keeps the carpet securely in place and enhances the overall finish keeping the carpet fibres upright. We recommend dressing with 15kg of sand per square metre. The sand is kiln dried and packaged in 25kg bags. Please note that the sand we supply has been selected for its colour and rounded properties under no circumstance should sharp sand be used for the infill.

SKIP BAGS : If required we can provide skip bags for easy removal of your old turf. We would recommend that you remove your existing turf to depth of 25mm (1 inch). Use the lawn area and multiply it by 50 to calculate the overall weight of the waste in kg (eg. in this example the 37 sq.m. lawn area x 50 kg would give 1850 kg of waste, therefore 2 1000kg skip bags would be required). Please note cost is for bags only and you need to allow a collection charge for each bag. Details can be found at www.hippowaste.co.uk.

FITTING : Although installation of SOWGREEN is very straightforward we do offer an installation service.

If you choose this option we will assume that there is easy access to the garden through a minimum 800mm wide gate. We will provide an amount of sharp sand for taking out minor undulations but the carpet will be laid to existing falls. We shall assume that the SOWGREEN is to be laid in the same configuration as the existing lawn.

The cost for this service is calculated per square metre of lawn area, however there is a minimum charge. This costs also includes removal of spoils from site.
