

Artificial Grass  
for  
**Nurseries & Playschools**

## SOWGREEN® the perfect solution for problem play areas

### Q. What is SowGreen®?

A. SowGreen® is the perfect low-maintenance alternative to natural grass, allowing you to make use of play areas that are otherwise inaccessible. In SowGreen® we have developed a unique, British-manufactured artificial grass using two different colour tones to achieve a natural look and feel that is both fade-resistant and hard wearing.

### Q. How could SowGreen® improve our play facilities?

A. SowGreen® offers a total solution to any problem areas at your nursery or playschool; year-round use, no cutting, feeding or weeding, and more importantly, no more muddy clothes or shoes! SowGreen® is a soft, textured surface, safe for children to play on, and more aesthetically pleasing than tarmac or bark chippings, too.

### Q. Why should we choose SowGreen®?

A. With over 25 years' experience in the synthetic sports surface industry, our working knowledge of the latest techniques and innovations is unrivalled. We have worked closely with schools and local authorities to identify key needs, and have developed SowGreen® as the perfect product for domestic and commercial projects. We operate across the UK from our headquarters in Leicester; our dedicated installation teams are all CRB-checked, and our working practices are also accredited by CHAS and EXOR.

### Q. What's involved in a SowGreen® installation?

A. As well as replacing natural turf, SowGreen® can be laid onto hardstanding areas such as tarmac or concrete, as well as around trees or play equipment. We offer a complete fitting service and a fast turnaround from date of order.

### Q. How can we arrange a SowGreen® quotation?

A. Simply call our national office on 0845 621 7000 or visit our website [www.sow-green.co.uk](http://www.sow-green.co.uk) to arrange your free, no-obligation site survey. We offer a sliding scale of costs for larger areas, and your quote will be valid for 12 months, to help with long-term budgeting.

## Brambley Tots Day Nursery Bedfordshire

“ We first had an area of SowGreen® installed at our nursery in September 2008, to replace one of our enclosed gardens where the natural grass was wearing away.

Everyone here was really pleased with the way our new garden looks, so much so that we have just had another area at the nursery converted from wetpour rubber to SowGreen®

Thank you to everyone at SowGreen® for making the play areas at our nursery more inviting and accessible for the children and staff.

” Helen Lichfield

## Sticky Fingers Pre-School Hampshire

“ Muddy areas were causing problems for us and stopping the children from enjoying the outdoor facilities to the full, so we called in the SowGreen® team to help us out.

The service we received was quick and efficient from start to finish, with the whole project from site survey, quotation to installation completed in only two weeks, and within our budget, too!

” Claire Tobin

## Hickory Dickory Dock Day Nursery Worcestershire

“ We wanted to offer a soft, textured play area for babies and toddlers to crawl around, explore their surroundings and enjoy being outdoors. SowGreen® offered the perfect solution, and we are all so pleased with our new play area that it has even attracted the interest of the local media!

” Serina Thomas

Extract from Kidderminster Chronicle July 2009

## 345 Play Lincolnshire

“ Our playschool is based in the local church, and our facilities include a secure enclosed outdoor play area.

We are mindful of OFSTED's best practice for nursery care and wanted to provide the children with a garden that could be used in all weathers, but that was also textured and stimulating for them, to enhance their learning. Thank you SowGreen® for turning our play area into a lovely transition zone for the children!

” Kirsty Casey

For your free, no-obligation site survey, call us now on 0845 621 7000 or visit our website: [www.sow-green.co.uk](http://www.sow-green.co.uk)

We operate across the UK from our headquarters in Leicester; as you'd expect from an ISO 9001 accredited company, our dedicated installation teams are all CRB-checked, and our working practices are also accredited by CHAS and EXOR.

As well as offering the perfect landscaping solution, SowGreen® can also be used in areas where fall height protection is required, such as under climbing frames.

SowSafe™ incorporates the use of a varying number of 15mm geotextile pads positioned under the SowGreen® surface to add shock absorbency and comes with a Certification of Compliance of up to 2.1 metres.

If you need any advice about whether your area is compliant, we would be happy to help.

### **Why not add a splash of colour?**

For those clients looking to mix a bit of colour with SowGreen®, why not try one of our UrbanTurf® Play Range?

At 15mm in thickness, it is a thinner and denser carpet than SowGreen®, but the two products can be used together or on their own.

All the carpets we supply are designed for outdoor use and are fully UV-stable, so if you choose Apple Green, Gingerbread Red or even Bubblegum Blue, you know they'll add a colourful flavour for a minimum of 5 years, guaranteed.

Our representative would be pleased to discuss your options.
