

Artificial Grass for Open Spaces

## MAKE THE MOST OF YOUR OPEN SPACE...

Technical Surfaces have over 25 years experience within the synthetics sports industry. Over this period it has always moved with the times, looking at problem areas and how they might be solved. Its move to offer maintenance and repair services to artificial surfaces over 10 years ago was seen as radical at the time, but now is commonplace within the industry.

In line with this approach Technical Surfaces has seen over the last few years major improvements in the manufacturing technology of artificial grass and has long held the belief that this technology would benefit schools and authorities in their battle to keep natural grassed areas useable. The constant maintenance work required – cutting, feeding and weeding, to keep turfed areas playable, coupled with the unpredictability of the British weather, made the task almost impossible. Other solutions had been tried, such as bark and rubber, but all have had their own inherent problems.

In partnership with a UK manufacturer, Technical Surfaces, set about the task to find a solution to this problem and the result was SowGreen®, an artificial grass for all your landscaping needs. A truly British product, SowGreen® is manufactured from not one but two different colour tones which ensures that SowGreen® looks lifelike all year round. It is so good in fact that many of our clients have laid SowGreen® up to existing natural grass! If you presently have areas not used because of the mud or mess and want to make the most of your open space, SowGreen® artificial grass is your cost effective solution.

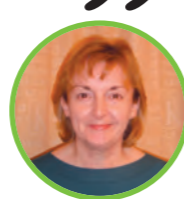

Outlined here are just a few of our case studies. If they sound familiar perhaps we can help you. Give our national office a call on 0845 621 7000 where we would be happy to arrange a free site visit to assess your needs. We operate nationally and all works are carried out by our CRB checked operatives.

## Holywell Primary School, Birmingham

“ We had problems with a grassed area under a large established tree on one of our playgrounds. The site slopes and surface water would run off, washing away what little grass there was and moving mud down onto the soft play area and playground below.

installation took less than a week, over half term and the transformation was amazing. The children play safely on the area at all times of the year and they love it. We are so pleased with the results that we have just recently completed a second area.”

Ann Farmer  
School Bursar

## Cromer High School, Norfolk

“ Technical Surfaces have been maintaining our synthetic sports pitch for many years, and when they introduced me to their SowGreen® synthetic grass, I immediately thought of how great this would look in our courtyard area.

The installation of the Sowgreen caused a few headaches due to the fact that the area was only accessible through School buildings. However the SowGreen® Installation Team worked diligently keeping disruption to a minimum.”

Mervyn Ransome,  
Head Groundsman

Before

After

## Greystoke Primary School, Narborough

“ We had previously spent quite a lot of our fund raising money on some play tyres for the junior playground.

No mud or mess! It was certainly money well spent.”

Carla Power,  
Deputy  
Chairman, PTA

Although the children loved them the teachers didn't love the mud and mess that they trampled into the school afterwards!

When we were shown SowGreen® we soon set about raising the additional funds to upgrade the grass area for SowGreen®.

The transformation was unbelievable. It just looks like newly laid turf but the difference is the children can use the area all year round.

## William Patten School, London

“ We would like to thank you for the fantastic job that you did at our school.

The mound in the small playground has been an eyesore for quite some time now, but it has been totally transformed by your teams' hard work.

The children are really enjoying the space now and it has made the lunchtime supervisors jobs a lot easier too!”

Kathryn Kyle, Headteacher

# SOWGREEN... the perfect solution for problem grassy areas

Our dedicated SowGreen installation teams are highly trained and experienced. We offer a nationwide fitting service, operating out of our East Midlands headquarters.

Turf removal is not always necessary, as SowGreen® can also be laid directly onto all hard standing areas such as tarmac and concrete.

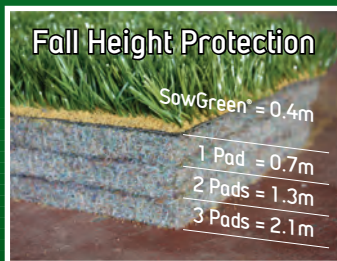

Give our national office a call on **0845 621 7000** where we would be happy to arrange a free site visit to assess your needs.

We operate nationally and all works are carried out by our CRB-checked operatives, and our working practices are accredited by CHAS, EXOR and ISO 9001.

Tel 0845 621 7000

As well as offering the perfect landscaping solution, SowGreen® can also be used in areas where fall height protection is required, such as under climbing frames.

SowSafe™ incorporates the use of a varying number of 15mm geotextile pads positioned under the SowGreen® surface to add shock absorbency and comes with a Certification of Compliance of up to 2.1 metres.

If you need any advice about whether your area is compliant, we would be happy to help.
